

Construction Preparation

Considering the increased demands on energy efficiency and environmental relief through a reduction of CO₂ emission, ALS has authorized a feasibility study for the realization of an energy self-sufficient heat supply (independent from district heating or gas) before the construction of the new ALS building starts.

This study was supported by the State of Thuringia with funds of the European Union.

Start of Construction

The construction of the new building started in May 2017.

Bare Brickwork

Due to favorable weather conditions and an excellent construction company the skeleton could be finished 3 weeks earlier than scheduled.

Accompanied with bright sunshine we celebrated the topping out ceremony on 22nd of September 2017.
