

Your Benefits

Quality

- Highest cell integrity and viability
- No intracellular changes in the signalling due to gentle harvesting techniques which allows gene expression and/or proteomic studies
- A fully customizable, real microscope system for live cell imaging
- A variety of analysis tools
- Standardisation by exclusion of personal variances

Flexibility

- Utilizing of Cell type specific detection-and harvesting protocols
- Utilizing of all common labware
- Integration in complex workstations

Efficiency

- No elaborate and time consuming pre-treatment of cells
- Replacement of manual picking processes with quality control
- Performing time and labour routine lab work as a "byproduct" (e.g. over night)
- Saving manpower
- Complete process documentation
